Hackathon Task #4

Dynamic Frontend Components Documentation:

Endpoint Details:

To develop a dynamic product page for displaying marketplace data fetched from Sanity CMS, focusing on modular and reusable component design. The aim is to ensure scalability and responsiveness, leveraging professional workflows to build efficient solutions. This includes tackling challenges such as slug creation, error handling, and ensuring smooth integration of dynamic components for an optimal user experience.

- **Endpoint**: http://localhost:3000/product/31848799-644b-44e1-ba4c-3c5256c7dadd
- **Path Display**: The path is displayed in the first image on the product page.
- **Slug Creation**: A slug was successfully created for this endpoint. Upon running a console log in the terminal, the slug was fetched correctly and confirmed.
- **Error Encountered**: Despite fetching the slug successfully, it was not displaying on the UI due to an error.
    - **Issue**: The dynamic page displayed a "not found" error.
    - **Temporary Solution**: Instead of showing the slug, the ID is currently displayed.
